

Use a Smart Phone? Be a Smart Driver

Apps can reduce driver distraction by 25-30%

Even if only used 70% of the time

But how?

Before starting the engine:

- ✓ Activate "Do Not Disturb" or "Android Auto" in your phone settings
- ✓ Select Automatic so the feature turns on once you're driving
- ✓ Enable Bluetooth
- ✓ Favourites can call, but remember to pull over & park before taking the call, or let Siri do the talking
- ✓ You can still stream music via your playlist & use Maps

If the app fails, be strong: don't take the call or look at the phone
