

# Don't risk it – trains travel faster than you think

85% of drivers could see a train

2km away

They detected the train was moving

1.6km away

BUT...

97% of drivers' estimates of high speed trains were **UNDER** the actual train speed by

44%

130km/h was viewed as 85 km/h

The train is slow.

I have time to go before the train.

The Australian Standard now ensures you can detect trains early enough whichever vehicle you drive; it is your responsibility to give way to the approaching trains you see.
