What's interesting about RGAI?

RGAI tools are

- generally overlooked in (current) institutional and publisher policies
- being adopted in context of experimentation, uncertainty, and controversy
- becoming embedded within digital infrastructures and entangled with human practices (cultures of use)
- bound up in ongoing processes of platformisation and automation of academic/scholarly work
- an emergent player within the “scholarly economy”

RGAI and the scholarly economy

- The “scholarly economy” (e.g., Goldenfein & Griffin, 2022; Hyland, 2023)
- “platform capitalism” reshaping universities and academic research (Mirowski 2018; Mirowski 2023).
- Google Scholar, academia.edu, and ResearchGate roles in mediating academic research discovery, dissemination, and citation practices (e.g., Goldenfein & Griffin, 2022; Darwin, 2022)
- RGAi platforms contributing to the growth and complexity of automation and platformisation of scholarly research and publishing:
 - freemium pricing models
 - endorsement and promotion by academic AI “thought leaders”
 - inclusion on lists of recommended research tools developed by university libraries

Research on GenAI and academic publishing: the current state of play

- Most research on GenAI and academic publishing/research focuses on technological limitations, risks of bias, lack of transparency, etc. (e.g., Bell, 2023; Oduoye et al., 2023)
- Limited research addressing ongoing automation and platformisation of academic research and publishing (Watermeyer et al., 2023)

Approaching RGAI as sociotechnical systems

- What's missing?: Understanding/approaching (Research) GenAI tools as “communicative AI” (Hepp et al., 2023) and as sociotechnical systems embedded within and contributing to a scholarly economy
- Walkthrough method (Light, Burgess & Duguay, 2016) as a way of approaching RGAI tools as sociotechnical systems
 - Environment of expected use: vision, operating model and governance
 - Technical walkthrough: registration and entry, everyday use (functionality and affordances), app suspension closure and leaving

Your software is **absolutely fantastic** and has been giving me a lot of help during my thesis writing!

Yifei Hu

Major in AI, Monash
University

As a non-native English speaker, I should edit my writing carefully. I use many apps to do so. Writefull **spots mistakes others do not**. Incredible.

Andrea Beltran Lizarazo

PhD student in Sociology, Boston University

It is clearly **designed for researchers** by researchers! I have used other more generic proofreading software as well, but it is really clearly calibrated for academic writing!

If we don't validate this approach, we keep doing research that might be crap.

Academize

 Copy

Without validation of this approach, we continue to do research that is deemed to be merely flawed.

 Copy

If this approach is not validated, research that might be a bit ad hoc continues to be conducted.

 Copy

If this approach is not validated, we continue to do research that may be ineffective.

Governance models

An illustration featuring a blue typewriter with a white sheet of paper being typed on by two white robotic hands. The background is orange with a large white rounded rectangle. There are crumpled pieces of paper on the left and right sides.

Our vision & mission

Our mission is to make the world's expert knowledge discoverable and consumable. Searching for scientific research has long been a painful process, no matter your background. If used thoughtfully, carefully, and elegantly, we believe AI can change this equation.

Whether you are a lifelong researcher or an everyday consumer, we aim to be your go-to source in the search for expert knowledge.

And we're just getting started.

Our story

Christian and I are former D1 athlete teammates from the families of professors, scientists, and teachers. We deeply love and appreciate the value of consuming evidence-based content. However, it felt inaccessible to us, we didn't have the skills (or the attention span) to find and process the information with traditional academic tools.

We wanted to build a product that would allow anyone to engage with and consume the best sources of data on the planet. A product that would democratize access to science.

- Eric Olson, co-founder
